

P1 IA Criterion A

Scenario

Tecmun is a student group in PrepaTec. The students frequently host debates to which other students attend, and other students moderate. At the start of every debate, a "speaker's list" is opened, in order to get every student a chance to express their opinion on the topic. Tecmun also has special protocols for specific committees, which change or add things on top of the normal protocol, therefore allowing for a more appropriate and developed debate. An add-on to Tecmun's existing program (Mota) will be created. This program will allow students to request being added to the speaker's list, promptly allowing the moderators to approve or deny the request. It will also modify and add specific functionality in case a committee with special protocol requires it, as well as add or fix missing functionalities in the program. The adviser and customer will be a member of the High Secretary of Tecmun, who knows how to use the existing program, and can provide advice on how to tackle this problem.

What does this relate to?

Rationale

The current process of adding people to the speaker's list is inefficient. The students who want to be added raise their hands, and the moderator takes a picture, passing it to the person on the computer to add the students to the speaker's list. This is flawed, because in a student group with over 100+ students, not everyone knows everyone's names. This results in the students moderating usually ending up adding the people they know multiple times, and not allowing others to be added to the speaker's list. With an improved system, students can request the moderators to be added to the speakers list, with no need to know everyone's names, no need to take a picture and disrupt the debate, and also fairness to those being added in the correct order. Furthermore, the current program lacks adaptability for committees with

Computational context???

special protocols. An example of this is the lack of change from 'Topic' to 'Case' regarding court protocol, or the lack of a screen for the containment protocol when entering an agreement in negotiation exercise. Finally, the program lacks certain functionalities used within the base protocol, such as a screen for when a motion to open a topic is proposed, or an option to modify the official status for committees that do not use 'delegate'. By correcting these small shortcomings, delegates attending Tecmun will be able to understand the protocol better, whether it is the base protocol or the special protocol, as well as understand that Tecmun takes its procedure seriously and professionally.

where is language environment, software, etc.???

incomplete

Success criteria

- An external device will be able to connect to an active session.
- An external device will be able to send requests to be added to the speaker's list.
- Moderators will be able to accept or deny requests as they come in.
- The application will be properly integrated with Mota, the pre-existing program Tecmun uses.
- When a moderator accepts a request, it will be automatically added to the speaker's list in the Mota application.
- Moderators can stop requests from coming in, and allow them at different intervals.
- The application will verify the user's name is their name and not a pseudonym or another person's name.
- Moderators will be able to block and unblock certain users from sending requests.
- The application will be able to be accessed through common day-to-day devices, such as smartphones, tablets, and computers.
- Users will be ~~notified~~ ^{notified how?!} when actions on their requests are taken.
- Moderators will be able to delete or modify queue positions using Mota's user interface.
- The application will display basic information about the debate to the users which is input by the moderators. Such as: current topic, committee, language, etc.
- The application will handle connectivity issues by raising a notification to the moderator and user.
- The application can impose a cooldown on users, avoiding them from placing their name too many times or too quickly. This cooldown will be automatically placed on all users, unlike when blocking users.

document
and

too
specific

- Moderators will be able to configure the cooldown's time, as well as being able to disable it completely.
- The application will enable the option to activate a special protocol, which enables further options depending on the protocol selected.
- The application will add a button to Mota to change the wording from 'Topic A' & 'Topic B' to 'Case A' and 'Case B' in the case of court protocol committees.
- The application will add a screen for the Motion to Introduce Evidence and Motion to Introduce a Witness in the case of court protocol committees. This will include a screen for when the evidence is presented, and a screen for the first and second round of unlimited questions.
- The application will have a counter stating how many witnesses/evidence have been presented and approved by a committee with court protocol.
- The application will have an alternate option when opening a Moderated Caucus to make it of unlimited time for crisis protocol committees.
- The application will have a screen for when a crisis statement is presented for crisis protocol committees.
- The application will have an option to display when a committee finds itself in a state of warfare for warfare protocol committees. This notification will be non-intrusive, and will allow for other motions and screens to be opened.
- The application will have an option to display when a committee finds itself in a state of containment for containment protocol committees. This notification will be non-intrusive, and will allow for other motions and screens to be opened.
- The application will have an option to display a screen in the case of agreement in negotiation exercise for containment protocol committees.

- The application will add an option to change the committee's official status from 'delegates' to any other custom status. (e.g. 'Ambassadors', 'Ministers', 'Judges', 'Agents', etc.)
- The application will make Mota not start by default on the speaker's list screen if the speaker's list is not open during a session. Instead, it will add a button to go to and exit that screen when necessary.
- The application will add an option to show a screen in the case of the "Motion to Open Topic A/B/C" before the speaker's list is opened.

There are too many, not 2-10.

TOO LONG. Not 300 words.

Technical details are addressed.

Statement of work

Task	Due date	Description
Meeting with client	February 28th, 2025	Meeting with clients to discuss and set goals and expectations regarding the product. ✓
Acquire source code	March 31th, 2025.	E-mail the original owner of the program to ask for the source code. ✓
Design GUI for Special Protocols	June 10th, 2025	Design the GUI for all the add-on's functionality.
Develop integration with crisis protocol w/yon -develop- !!!	June 20th, 2025	Design the technical characteristics of the crisis protocol, which includes a crisis statement and moderated caucus of unlimited time.
Develop integration with containment protocol	June 27th, 2025	Design the technical characteristics of the crisis protocol, which includes a moderated caucus of unlimited time and a way to state the committee is in containment.
Develop integration with court protocol	July 4th, 2025	Design the technical characteristics of the crisis protocol, which includes switching topics to cases and the

		Motion to Introduce Evidence/Witness.
Develop integration with warfare protocol	July 11th, 2025	Design the <u>technical characteristics</u> of the crisis protocol, which includes a moderated caucus of unlimited time and a way to state the committee is in a state of warfare.
Develop toggling special protocols.	July 18th, 2025	Design the logic for toggling specific special protocols within the program. ✓
Develop toggling custom official status.	July 25th, 2025	Design the option to modify the official status from 'delegate' to any other. (e.g. <i>where are examples?</i>)
Meeting with client	August 10th, 2025	Meet with clients to review the current product. <i>too early, because doesn't start yet.</i>
Deploy pilot	August 15th, 2025 ↓ <i>Meeting by school starts 7:11</i>	Deploy and test the first pilot once school activities resume, which <u>will have</u> should have the special protocols implemented into the application. It will be tested by only a few committees to detect glitches and quality-of-life upgrades that should be added. Finally, it will be tested in a

		moderating session to see it in action.
Meeting with client	September 18th, 2025	Meet with clients to ensure the pilot was satisfactory and to get feedback.
Implement changeover	September 18th, 2025	Depends on the result of the meeting with the client. If satisfactory, send the program to all committees for use in moderating sessions. ✓
Implement changeover	September 18th, 2025	Depends on the result of the meeting with the client. If satisfactory, send the program to all committees for use in moderating sessions. ✓
Research migration to macOS	November 8th, 2025	Research whether or not the application can be implemented in macOS. NOT GUARANTEED, BUT IF POSSIBLE, IMPLEMENT. ✓
Conduct user training	September 23rd, 2025	Conduct a small session in between moderating sessions to teach the secretariat how to use the special protocols and extra features for those that apply. ✓
Produce manual	September 23rd, 2025	By this time, there should be a small guide on how to use the new program

Twice?
why?

you said
produce not
have results

Plan to
make this,
don't just
have it more

		in case not the entire secretariat is present for the training.
Develop speaker's list functionality	October 1st, 2025 ^ why so for agent? v	Develop the functionality of creating a QR code or numeric code within the application itself, as well as design a GUI for displaying it.
Develop speaker's list cloud functionality	October 25th, 2025 ↑ ↓	Develop the functionality of the speaker's list through a website external application etc. for it to be used on multiple devices through the cloud.
Develop speaker's list functionality integration with application	October 31st, 2025.	Develop the integration between the application and server. Ensure they can work together despite the application being developed in Visual Basic. explain why
Test in Model ↳ this is a pilot	November 12th, 2025 Failure system or switchover.	If feedback is good so far, test the program with the special protocols within the actual model itself. If there are too many errors, committees can switch back into the old program if needed.

What is the difference between these?

why etc.? multiple medium? have it clear and decided.

where was this? also, this is outdated

Meeting with client	November 18th, 2025	Meeting with clients to discuss the program's performance in the model and how it can be improved. Also discuss the newly produced speaker's list functionality and whether it can be implemented in the next edition's moderating sessions.
Deploy second pilot	February 3th, 2026	Deploy the second pilot of the speaker's list functionality within the moderating sessions of a few committees. Get feedback from the secretariat if possible.
Meeting with client.	February 5th, 2026	Discuss performance of the application and the new speaker's list functionality.
Polish product.	February 6th, 2026	Correct any errors/bugs and polish the application. Additionally, if any migration options for macOS are possible, implement them.
Conduct user training	February 10th, 2026	If the client allows, conduct the <u>second</u> and final round of user training for the new speaker's list functionality so that the secretariat

Polish
how

Also this was meant to go earlier. why now, after the 2 pilots?

explain why 2 and not 1

~~you already did this~~
you already did this w/ manual

		and all committees may use it.
Update user manual	February 10th, 2026.	Upgrade the user manual made before to include the instructions for the new speaker's list functionality. ✓
Deliver the final product.	February 11th, 2026.	Deliver the final add-on for the application after giving user training to ensure the secretariat can use it. ✓
